

PRESS RELEASE – MANYCAM

ManyCam has developed a new driver and reworked favorite features like PiP mode with the latest technology. With 4K resolution, and live streaming video quality is better than ever!

Montreal, QC, Jan 18, 2019 – ManyCam, leading webcam software and video switcher, keeps getting better with each update. With this software, users can create amazing live streams and enhance their video chats, while using platforms like Skype, YouTube, Facebook, Twitch and many others simultaneously. This version is the fastest and easiest to use yet, and it's available now.

With the current version, users can add multiple layers to each scene in the presets tab, which allows them to be more creative with their live video. Another great addition to ManyCam is the ability to preview your preset before streaming. So, when they add multiple cameras, images, videos, web sources, graphics, and effects, users can make sure everything is in the right place.

Now, users have more control over their live streaming settings, and the overall performance of ManyCam has been significantly improved. Users can broadcast with up to 4K resolution at 60 fps. Apart from adjusting the video resolution and frames per second, users can choose the bitrate or ManyCam's recommended settings. For best performance, ManyCam's users can activate hardware acceleration.

ManyCam has an intuitive user interface, which can be customized to increase users' productivity. With the click of a button, everyone can share their screen, record videos and tutorials, or add effects to their live videos. Also, users can add multiple picture-in-picture windows in one preset, replace backgrounds with the Chroma Key feature and much more.

With 80 million+ downloads, ManyCam has built a vast and highly engaged community. "One of the topics they talked about the most was 3D Face Masks and digital props for live video. Our team created a brand-new 3D Mask library and many new effects," said Patrice Carrenard, President at ManyCam. The team also created new categories in the Effects Gallery, to help users find the props they want. Most importantly, users can now organize their effects with the new Effects Panel.

ManyCam currently offers a free download with limited features and premium paid plans, for Mac and Windows users, individuals or businesses. The subscription plans are the Standard, Studio, Premium for individuals and there are the Enterprise options for businesses. Users can also choose between a yearly or a lifetime subscription. The latter gives access to all future versions and updates, forever.
